

Steps:

What you'll need

Birdisle kit
Pliers
Pole digger/auger

step 1

Place baffle (dome) on the all black pole so the metal part of the pole shows through.

step 2

unscrew ring from top of feeder
Remove top of feeder, set aside.

step 3

remove bottom of feeder using pliers, set aside
remove inside packaging from squirrel dome.

step 4

place bottom of feeder on top of pole and baffle with the pointed side up.
place seed chamber on top, sandwiching the bottom between the baffle. Screw into place.

Important!

Before digging hole, ensure no pipes or electrical wires

step 5

Connected top half

Use fence post digger to dig a hole 2ft deep (deep enough to bury the exposed metal).
Pack down removed soil around post. Check with level. Screw on perch.

step 6

once buried and stable, place feeder pole in the grey stabilizer
move stabilizer up and rest atop the buried pole. Fill your stable feeder with seed.

step 7

Lift feeder up and twist into place

step 8

Sit back and enjoy the view

Notes:

- The full feeder weighs approximately 30 pounds
- This system can be used for bird houses and bird baths as well
- For best results: set up before the ground freezes and fill after hibernation season starts
